AGAP System — Client Presentation Script

Barangay Tumana Katarungang Pambarangay Digital Management System

Audience: Lupon Captain (Punong Barangay), Secretary, Clerk, Lupon Members, Summons Server
Format: Live system walkthrough with presenter narration

> NOTE
>
> **How to use this script:** Each section contains a **Presenter Script** (spoken narration), a **Demonstrate** callout (what to show on-screen), and a **Transition** line to the next section. Bold text indicates emphasis during delivery.

🟢 Opening — Welcome and System Overview

Presenter Script

> *Good morning/afternoon, everyone. On behalf of the development team, I'd like to welcome you to this presentation of the **AGAP System** — the Automated Katarungang Pambarangay case management platform designed specifically for Barangay Tumana.*
>
> *Today, we will walk you through the entire workflow of the system — from the moment a complaint is filed, all the way to its resolution or referral. We will show you exactly how each of you — the Punong Barangay, the Clerk, the Lupon Members, and the Summons Server — uses the system in your respective roles.*
>
> *The goal of this system is simple: to make barangay justice more **organized, transparent, and efficient** — replacing manual paperwork with a digital system that tracks every case, every summons, every hearing, and every document.*
>
> *Let us begin.*

🔐 SECTION 1 — Logging In and Role-Based Access

Presenter Script

> *The first thing to understand is that not everyone has the same access in the system. Each user logs in with their own account, and the system automatically shows only the tools and features that are relevant to their role.*
>
> - **Administrator / Punong Barangay** — full access to all features, cases, reports, documents, and settings.
> - **Lupon Clerk** — manages complaints, issues summons, documents hearings, and generates reports.
> - **Lupon Member** — views assigned cases, participates in mediation and conciliation workspaces.
> - **Summons Server** — dedicated view for managing summons delivery, recording officer's returns, and uploading proof of service.
>
> *This means there is no confusion about who is responsible for what. Every action in the system is logged and attributed to the user who performed it.*

🖥️ Demonstrate

- Navigate to the **Login Page**
- Show the login form with username and password fields
- Log in as the **Lupon Clerk** — point out that the system redirects to the **Clerk Dashboard**
- Briefly log in as the **Summons Server** — show the **Summons Server Dashboard**
- Return to the Clerk/Admin account for the rest of the demonstration

➡️ Transition

> *Now that we are logged in, let's look at what the dashboard tells us right away.*

📊 SECTION 2 — The Dashboard

Presenter Script

> *After logging in, each user lands on their **Dashboard**. This is the command center of the system.*
>
> *The dashboard gives an **at-a-glance overview** of everything happening in the barangay's dispute resolution process. You can see:*
>
> - How many complaints have been filed
> - How many are currently active
> - How many cases are in mediation, in conciliation, or already resolved
> - Upcoming hearings and deadlines
> - Recent system notifications
>
> *For the Clerk and Captain, this means you always know the current status of all cases without having to search through paper folders. Everything is right here on one screen.*

🖥️ Demonstrate

- Point to the **statistics / metric cards** at the top of the dashboard
- Point to **upcoming hearings / scheduled sessions** if visible
- Show the **notifications or inbox icon** in the navigation bar — explain that the system sends alerts when actions are needed (e.g., a summons is due, a hearing is approaching)
- Show the **sidebar navigation menu** — briefly name the key sections: Complaints, Cases, Documents, Summons, Hearings, Reports

➡️ Transition

> *Let us start at the very beginning — how a complaint enters the system.*

📝 SECTION 3 — Filing a Complaint (Complaint Registration)

Primary User: Lupon Clerk / Administrator

Presenter Script

> *When a resident comes to the barangay to file a complaint, the **Lupon Clerk** opens the complaint registration form. This is the official entry point for every dispute in the system.*
>
> *The form follows the KP Form 7 structure — the official pre-docketing intake form under the Katarungang Pambarangay rules.*
>
> *The Clerk fills in:*
>
> - **The nature and category of the complaint** — the system provides a complete list of complaint categories in both English and Filipino
> - **The complainant's information** — if the person is already in the barangay's resident database, the Clerk simply selects their name and all details are automatically filled in
> - **The respondent's information** — same process
> - **The incident details** — date, time, location, and a full narrative statement describing what happened
> - **Any supporting evidence or documents** — the Clerk can attach scanned files or photos directly to the complaint
>
> *The system also performs an automatic **duplicate check** to alert the Clerk if a very similar complaint has already been filed, preventing confusion and double-entries.*
>
> *Once saved, the system automatically assigns a **KP tracking number** to the complaint and a digital copy of **KP Form 7** is immediately available for review and printing.*

🖥️ Demonstrate

- Open **Complaints** → **Add New Complaint**
- Show the complaint category dropdown — emphasize the comprehensive list
- Show the resident selection field — demonstrate how selecting a resident auto-populates their details
- Fill in a sample incident narrative
- Show the file attachment field
- Submit the form
- Show the system redirecting to the new complaint's detail page with a tracking number assigned

➡️ Transition

> *With the complaint filed, the system immediately moves into the preliminary stage — what we call Paanyaya.*

📨 SECTION 4 — Paanyaya (Preliminary Invitation Stage)

Primary User: Lupon Clerk / Administrator | Summons Server

Presenter Script

> *Before a case is formally docketed and scheduled for mediation, the Katarungang Pambarangay rules require that both parties be given a preliminary invitation — the **Paanyaya** — to appear before the Punong Barangay.*
>
> *In the AGAP system, the Paanyaya stage has two independent processes:*
>
> **Paanyaya 1** — The first preliminary invitation is served to the **Respondent**. The Summons Server physically delivers this invitation to the respondent's address.
>
> **Paanyaya 2** — A second invitation stage if needed, following the same process.
>
> *Each Paanyaya stage supports up to **6 delivery attempts**. After every attempt — whether successful or not — the Summons Server is required to record an **Officer's Return**. This is the official record of what happened during service: was the person home? Was the notice received? If not, what was the reason?*
>
> *The Clerk monitors this progress in real time. The system clearly shows how many attempts have been made and whether service has been completed.*
>
> *Once both Paanyaya stages are resolved — meaning both parties have been properly notified — the Clerk can then escalate the complaint to formal docketing and schedule the first mediation.*

🖥️ Demonstrate

- Open the complaint's detail page → click on the **Paanyaya tab**
- Show the **Paanyaya 1 and Paanyaya 2 side-by-side cards**
- Show the attempt counter (e.g., "0 of 6 used")

- Click the button to **Issue Paanyaya Stage** — show the form where the Clerk sets the invitation date, time, and venue
- Switch to the **Summons Server view** — show how the server sees their pending deliveries
- Show the **Officer's Return recording** — the Summons Server fills in the outcome (Served, Failed, etc.)
- Return to the Clerk view and show the updated attempt status
- Show the **Escalate to Formal Docketing** action button once prerequisites are met

➡️ Transition

> *With the Paanyaya completed, the complaint is now formally docketed as a case. This brings us to the Summons and Mediation stage.*

📬 SECTION 5 — Issuing Summons and Scheduling Mediation

Primary User: Lupon Clerk / Administrator

Presenter Script

> *Once a complaint is formally docketed into the system as a case, the **Lupon Clerk issues a Summons**. This is the official notice ordering both parties to appear before the Punong Barangay for mediation.*
>
> *When the Clerk issues the summons, the system automatically:*
>
> - **Generates KP Form 8** — the Notice of Hearing for the Complainant
> - **Generates KP Form 9** — the official Summons for the Respondent
> - **Records the scheduled mediation date, time, and venue**
> - **Notifies the Summons Server** that a new summons needs to be delivered
>
> *The Clerk simply selects the mediation schedule — the system even checks for scheduling conflicts to prevent two cases from being assigned to the same time slot.*
>
> *This eliminates the need to manually write out summons forms. The system generates them instantly and stores them digitally.*

🖥️ Demonstrate

- Open a formally docketed complaint
- Click **"Issue Summon — 1st Attempt"** button
- Show the scheduling modal: date picker, time, venue field
- Show the conflict detection — try to pick a conflicting date and show the system's warning
- Confirm and submit — show the success message
- Navigate to **Documents** — show the auto-generated **KP Form 8** and **KP Form 9** available for download and print
- Open the **Proof of Service page** — show that the Summons Server now sees this case in their queue

➡️ Transition

> *Now the Summons Server takes action. Let's see how they record proof of service.*

📍 SECTION 6 — Summons Delivery and Proof of Service

Primary User: Summons Server

Presenter Script

> *The **Summons Server's** primary job in the system is to manage the physical delivery of summons and record the results.*
>
> *After logging in, the Summons Server goes to their dedicated **Summons and Proof of Service** section. They can see all pending cases that require summons delivery, with clear tabs:*
>
> - **Pending Delivery** — cases where summons have not yet been served
> - **Fully Served** — cases where all parties have been successfully notified
>
> *For each case, the Summons Server records whether the summons was successfully delivered. If delivery fails — for example, the person was not home — they record the reason and the system allows additional attempts.*
>
> *The system supports up to **three delivery attempts** for summons. After exhausting attempts, the Clerk is notified to take appropriate action according to KP rules.*
>
> *Proof of service documentation can be recorded directly in the system, ensuring a complete and auditable trail of every delivery effort.*

🖥️ Demonstrate

- Log in or navigate as the **Summons Server**
- Open the **Proof of Service** page
- Show the **filter tabs**: All Cases, Pending Delivery, Fully Served
- Show the **search bar** — demonstrate searching by KP number or party name
- Open a pending case — show the delivery recording form
- Record a successful delivery — show the case moving to "Fully Served"
- Show how a failed attempt is recorded and triggers another attempt option

➡️ Transition

> *With the summons served, both parties are officially notified. The case is now ready for mediation, which is presided over by the Punong Barangay.*

⚖️ SECTION 7 — Mediation (Punong Barangay Presides)

Primary User: Lupon Clerk / Administrator | Lupon Member (view)

Presenter Script

> *The **Mediation Stage** is where the Punong Barangay facilitates the first attempt at resolving the dispute. Under RA 7160 Section 410(b), the Punong Barangay may conduct mediation for up to **3 sessions or 15 days**.*
>
> *In the AGAP system, the Mediation workspace gives the Clerk a structured space to manage everything that happens in this stage:*
>
> - **Scheduling and recording each mediation session**
> - **Recording session minutes** — what was discussed, who attended, and what decisions were made
> - **Tracking attendance** — whether both parties appeared
> - **Recording the outcome** of each session
>
> *If parties fail to appear, the system allows the Clerk to record a **non-appearance**, which triggers show-cause procedures according to KP rules.*
>
> *There are two possible outcomes of mediation:*
>
> 1. **Successful mediation** → an Amicable Settlement is recorded and the case is resolved
> 2. **Failed mediation** → the case is referred to the Pangkat ng Tagapagkasundo for conciliation

🖥️ Demonstrate

- Open a complaint that is in Mediation stage → click the **Mediation tab**
- Show the **Mediation Proceedings and Workspace card**
- Click **"Open Mediation Workspace"** — show the workspace with session history and controls
- Show how a session is recorded with minutes
- Show the **attendance tracking** fields for complainant and respondent
- Show the **outcome options**: Settled, Continued, Failed → refer to Pangkat
- Demonstrate recording a session outcome

➡️ Transition

> *If mediation succeeds, the dispute is resolved and the Clerk records the settlement. If not, the case moves to the Pangkat for formal conciliation. Let's look at both paths.*

🤝 SECTION 8 — Recording an Amicable Settlement

Primary User: Lupon Clerk / Administrator | Lupon Captain

Presenter Script

> *When parties reach an agreement — either during mediation or at any later stage — the **Amicable Settlement** is recorded in the system.*
>
> *The Clerk enters the full terms of the agreement. The system then generates the official **KP Form 16 — Amicable Settlement** document, which is signed by both parties and the Punong Barangay.*
>
> *The case status is immediately updated to **Settled**, and the settlement record is stored permanently in the system. This creates an official, retrievable record that can be referenced if any party later claims non-compliance.*
>
> *If a party later fails to comply with the terms of the settlement, the Clerk can use the **"Reopen for CFA"** function to issue a Certificate to File Action — allowing the aggrieved party to bring the matter to court, in accordance with RA 7160 Section 417.*

🖥️ Demonstrate

- Navigate to a mediation or conciliation workspace with a resolved case
- Show the **Record Settlement** or settlement outcome action
- Show the settlement form — terms of agreement, signatures
- Show the generated **KP Form 16 (Amicable Settlement)** document
- Point to the case status badge changing to **"Settled"**
- Show the **"Reopen for CFA"** button that appears when a settled case needs to be re-elevated

➡️ Transition

> *Now let's look at what happens when mediation fails and the case needs to go to the Pangkat.*

👥 SECTION 9 — Referral to Pangkat ng Tagapagkasundo (Conciliation)

Primary User: Lupon Clerk / Administrator | Lupon Members

Presenter Script

> *When mediation before the Punong Barangay fails, the case is referred to the **Pangkat ng Tagapagkasundo** — the conciliation panel composed of Lupon members.*
>
> *Under RA 7160, the Pangkat is composed of **three members** chosen by the parties from the Lupon. The system manages this process:*
>
> - The Clerk records the **referral to Pangkat**, which opens the Conciliation workspace
> - Lupon members assigned to the Pangkat can view the case details and participate
> - The Pangkat has **15 days** to conduct conciliation hearings
> - Each hearing, its minutes, and its outcome are recorded in the system
>
> *If a party challenges the composition of the Pangkat panel, the system provides a mechanism to record and resolve challenges according to KP rules.*
>
> *Two possible outcomes of Pangkat conciliation:*
>
> 1. **Successful conciliation** → Amicable Settlement (KP Form 16) is recorded and case is resolved
> 2. **Failed conciliation** → A **Certificate to File Action (CFA)** is issued, allowing the case to be elevated to court

🖥️ Demonstrate

- Open a complaint that has exhausted mediation → click the **Conciliation tab**
- Show the **"Refer to Pangkat"** action button
- Show the referral form — Pangkat member selection, session scheduling
- Show the **Pangkat Conciliation Workspace** with session records and status

- Show the hearing attendance and minutes recording
- Show the **Pangkat assignment section** in the Case Overview

➡️ Transition

> *If conciliation also fails, the system enables the issuance of a Certificate to File Action. Let's see how that works.*

📜 SECTION 10 — Arbitration and Certificate to File Action (CFA)

Primary User: Lupon Clerk / Administrator

Presenter Script

> *The **Arbitration / CFA tab** handles the final stage of the KP process.*
>
> *There are two scenarios the system handles here:*
>
> **Scenario 1: Binding Arbitration (RA 7160, Section 413)**
>
> - At any stage of the proceedings, both parties may agree in writing to submit the dispute to binding arbitration
> - This is recorded using **KP Form 14** — the Arbitration Agreement
> - The Clerk records the arbitration award as **KP Form 15** — which carries the force of a final court judgment after 10 days
>
> **Scenario 2: Certificate to File Action (CFA)**
>
> - When all KP proceedings have been exhausted without resolution, a **CFA is issued by the Clerk**, authorizing the complainant to bring the matter to court
> - The system generates the appropriate CFA form based on the reason for failure:
> - **KP Form 20** — Confrontation before PB and Pangkat failed
> - **KP Form 21** — Complainant refused to appear
> - **KP Form 22** — Respondent refused to appear
>
> *No party can file a court case without a valid CFA issued by the Barangay. The system ensures this important step is properly documented.*

🖥️ Demonstrate

- Open the **Arbitration / CFA tab** of a case
- Show the **Arbitration workspace** with its current status
- Show the **CFA issuance** button — click it to open the CFA form
- Show the form fields: reason for issuance, case details
- Show the generated CFA document (KP Form 20) with preview and print options
- Point to the **statutory pathway cards** explaining when each CFA form applies

➡️ Transition

> *Beyond the main workflow, the system also has several supporting features that make case management much easier. Let's look at a few key ones.*

📁 SECTION 11 — Documents Center and KP Forms

Primary User: Lupon Clerk / Administrator | Lupon Captain

Presenter Script

> *The **KP Documents and Forms Center** is where all official templates and generated documents are stored and managed.*
>
> *The system maintains **over 25 KP form templates** — covering every stage of the process, from pre-docketing through Lupon mediation, Pangkat conciliation, arbitration, and certifications.*
>
> *Key features of the Documents Center:*
>
> - **Templates tab** — manage and upload official document templates. Each template can be customized with the barangay's letterhead and official seal
> - **Letterhead and Branding tab** — upload the official barangay logo and seal once, and all generated documents automatically use the correct branding
> - **Print Settings tab** — configure paper size and printing preferences for document output
>
> *When any document is generated from a case — such as a summons, a settlement, or a CFA — it is automatically stored and linked to that specific case. The Clerk can retrieve, preview, or print it at any time.*

🖥️ Demonstrate

- Open **Documents** → **KP Documents & Forms**
- Show the **three tabs**: Templates, Letterhead & Branding, Print Settings
- Open the **Templates tab** — show the list of available KP form templates
- Show how a template is associated with a specific form type
- Navigate back to a case and show how a document was auto-generated and linked

➡️ Transition

> *The system also helps manage schedules so hearings are never double-booked.*

🗓️ SECTION 12 — Hearing Schedule and Calendar

Primary User: Lupon Clerk / Administrator | Lupon Members

Presenter Script

> *Managing multiple cases means managing multiple hearing schedules. The AGAP system has a built-in **Hearings and Calendar** module.*
>
> *When the Clerk schedules a mediation or conciliation session, the system automatically checks whether the Punong Barangay or the Lupon Court Room is already booked at that time. If there is a conflict, the system warns the Clerk and suggests an alternative.*
>
> *The Calendar view gives an organized, visual overview of all upcoming sessions — making it easy to plan ahead and ensure no session is missed.*

🖥️ Demonstrate

- Open **Hearings** → **Schedules** or **Hearings** → **Calendar**
- Show the scheduled hearings list with dates, times, and associated cases
- Show the **calendar view** if available
- Show the conflict detection in action during a scheduling attempt

➡️ Transition

> *Case management also involves keeping the case team organized. Let's briefly look at case assignments.*

👤 SECTION 13 — Case Team and Lupon Assignments

Primary User: Lupon Clerk / Administrator

Presenter Script

> *Each formally docketed case has a **Case Team** — the Lupon members assigned to handle it. The Clerk manages these assignments from the case list.*
>
> *When the Clerk assigns Lupon members to a case, those members can then access the case's mediation and conciliation workspaces, view all relevant details, and participate in the process. This ensures accountability — everyone knows who is responsible for which case.*

🖥️ Demonstrate

- Open the **Case List** (from Cases in the sidebar)
- Show the case assignment section — how Lupon members are assigned
- Show that assigned members appear in the **Case Team card** within the case's Overview tab

➡️ Transition

> *Now let's look at how the system keeps everyone informed through its notification system.*

🔔 SECTION 14 — Notifications and Inbox

Primary User: All Users

Presenter Script

> *The AGAP system keeps all users informed through a built-in **Notification and Inbox** system.*
>
> *Whenever something requires attention — such as a new summons assignment for the Summons Server, an upcoming hearing deadline, or a case being escalated — the relevant user receives an **in-system notification**.*
>
> *Users can see their notifications by clicking the notification icon in the navigation bar. The inbox allows them to:*
>
> - Read new notifications
> - Mark notifications as read
> - Take direct action by clicking the linked notification to go to the relevant case or task
>
> *This eliminates the need for verbal reminders or manual follow-up — the system automatically alerts the right person at the right time.*

🖥️ Demonstrate

- Click the **Notification icon** in the navigation bar
- Open the **Inbox page**
- Show a sample notification — explain what triggered it
- Show the mark-as-read and action link functionality

➡️ Transition

> *Finally, let's look at how the system helps with reporting — one of the most important requirements for barangay operations.*

📊 SECTION 15 — Reports and Export

Primary User: Lupon Clerk / Administrator | Lupon Captain

Presenter Script

> *Every barangay is required to submit official reports to the DILG and maintain proper records. The AGAP system makes this effortless through its **Reports and Export** module.*
>
> *The Clerk or Punong Barangay can generate reports in four formats:*
>
> - **Monthly Report** — a summary of all case activity for a specific month
> - **Quarterly Report** — covering a three-month period
> - **Annual Report** — the full year's case statistics
> - **DILG / LTIA Report** — formatted specifically for submission to the Department of the Interior and Local Government
>
> *Each report shows case counts, resolution rates, types of disputes, and other key statistics — all automatically compiled from the data in the system. No manual counting or tallying is needed.*
>
> *Reports can be viewed on-screen, exported to CSV for spreadsheet use, or printed directly using the dedicated DILG / LTIA print function.*

🖥️ Demonstrate

- Open **Reports** → **Reports and Export**
- Select **Monthly** report type — pick the current month and year
- Click **Generate / View** — show the report results on screen
- Show the **Export CSV** button
- Show the **Print DILG / LTIA Report** button
- Briefly show the **Case Register Excel Export** section if visible

➡️ Transition

> *Before we wrap up, let's do a quick summary of the full workflow we just demonstrated.*

🗺️ SECTION 16 — Full Workflow Summary

Presenter Script

> *Let's take a moment to look at the complete picture of how a dispute moves through the AGAP system from start to finish.*

```
COMPLAINT FILED
    → Clerk registers complaint (KP Form 7 generated)
    → System assigns tracking number

        ↓

PAANYAYA STAGE (Pre-Docketing)
    → Clerk issues Paanyaya invitation
    → Summons Server delivers invitation, records Officer's Return
    → Up to 6 delivery attempts tracked per stage (2 stages)

        ↓

FORMAL DOCKETING
    → Clerk escalates to formal case
    → Case assigned a KP docket number

        ↓

SUMMONS ISSUED (Clerk)
    → KP Form 8 (Notice to Complainant) auto-generated
    → KP Form 9 (Summons to Respondent) auto-generated
    → Summons Server records proof of delivery (up to 3 attempts)

        ↓

MEDIATION (Punong Barangay presides)
    → Up to 3 sessions / 15 days
    → Session minutes and attendance recorded

    ↙ Settled                    ↘ Not Settled

AMICABLE SETTLEMENT         REFERRAL TO PANGKAT
(KP Form 16 generated)          ↓
    ↓                   CONCILIATION (Pangkat)
CASE RESOLVED               15-day period, sessions recorded
                            ↙ Settled        ↘ Not Settled
                    AMICABLE SETTLEMENT    CFA ISSUED
                    (KP Form 16)           (KP Form 20/21/22)
                        ↓                      ↓
                    CASE RESOLVED         COURT REFERRAL
```

🎯 SECTION 17 — Key Benefits Summary

Presenter Script

> *Before we open the floor for questions, let me summarize what the AGAP system brings to Barangay Tumana:*

Without AGAP	With AGAP
Manual paper forms for every case	Digital forms auto-generated from case data
No tracking of summons delivery	Real-time tracking of every delivery attempt
Separate logbooks for different stages	All stages in one integrated system
Manual report preparation	Automated monthly, quarterly, and DILG reports
Risk of lost documents	All records stored digitally and permanently
No accountability trail	Every action logged with user and timestamp
No hearing conflict detection	Automatic conflict check when scheduling
Hard to check case status	Live status on every case at all times

> *The AGAP system does not replace the people in this room. **It supports each of you** — giving you better tools to do your work more accurately, more efficiently, and with a complete record that protects both the barangay and the residents you serve.*

❓ SECTION 18 — Closing and Q&A

Presenter Script

> *That concludes the main walkthrough of the AGAP System. We have covered:*
>
> ✅ How to log in with role-based access ✅ How to register a complaint ✅ How the Paanyaya process is tracked ✅ How summons are issued and served ✅ How mediation, conciliation, and arbitration are managed ✅ How settlements and CFAs are generated ✅ How documents are stored and reports are generated
>
> *The system is built specifically around the Katarungang Pambarangay rules under RA 7160, so every step you have seen today follows the legal process you already know — just made faster and more organized.*
>
> *We are now open for questions. If there is any feature you would like to see demonstrated again, or any part of the workflow you would like us to explain further, please let us know.*
>
> *Thank you very much for your time and attention.*

> **TIP**
>
> **During Q&A:** Have the system open and ready to navigate to any page on request. Common questions may include: "What happens if the system goes offline?", "Can we recover deleted records?", "How do we add new users?", and "What if a complaint is withdrawn?"

— End of Presentation Script —
